Grade level: Senior High School Students

Learning Center: General Emilio Aguinaldo National High School- Bailen

Year: 2017-2018

Adviser: Mrs. Mary Ann B. Gatpandan

This study was conducted to analyze the agricultural system in the Municipality of General Emilio Aguinaldo. A total of one-hundred (100) farmers from selected barangays in Bailen are surveyed to answer the formulated questionnaire. Also, the researchers selected three (3) farmers that were interviewed to support the quantitative data with the experiences of farmers.

A mixed method of research was used to know the level of awareness, knowledge, and satisfaction and to describe the experiences related to the topic of this study. Descriptive method of research was used to analyze the agricultural system in the municipality of Bailen from past and present.

For the quantitative part, the major tool used in data gathering was a researchers-made questionnaire which is divided into three parts. The main foundation of data for the qualitative part is from the interviewees who answered

through the unstructured interview. The total number of respondents who answered the questionnaire is 100 and 3 participants were interviewed for the supporting statement from selected barangays.

The statistical treatment used after data had been gathered is the weighted mean. It was used to determine the level of awareness, knowledge, and satisfaction of the farmers towards the different organizations, programs and activities implemented by the Department of Agriculture in Bailen.

Furthermore, the farmers expressed that organizations and programs helped them to organize their works and help them to improve their way of farming. Additionally, programs and organizations are helpful to them because they gained additional knowledge in farming. It also gives an opportunity for farmers to share their knowledge and experiences with each other.
