Year: 2017-2018

Subject Teacher: Mrs. Mary Ann B. Gatpandan

This study was conducted to evaluate Alternative Learning System (ALS) program in the District of General Emilio Aguinaldo. The data came from 50 student-respondents for the quantitative part and 9 participants for the qualitative part.

Mixed method research was utilized. It is the combination of quantitative and qualitative methods to describe and evaluate ALS program. The descriptive method will be used for quantitative part and phenomenology for the qualitative part. A phenomenological approach was used to narrate the experiences based on parents and learners who studied and studying at ALS.

The major tool used in data gathering was a researchers-made questionnaire which was divided into two parts.

The statistical treatment used after data gathering was frequency and rank distribution and for the qualitative part, the researchers used the Litchman's 3Cs of analysis.

From the results of the study, ALS learners are between 16-20 years old who are literate but have not completed basic education program. The classroom is well-ventilated and it is a very helpful program to an individual who wants to continue the schooling. Thus, we found that ALS is good and effective for students' learning in the District of General Emilio Aguinaldo.
